Nicorette Inhalator

Uses

Relieves nicotine withdrawal symptoms as an aid to smoking and vaping cessation. Helps smokers and vapers ready to stop immediately, and those cutting down their nicotine usage before stopping. Can be used in pregnancy and lactation when making a quit attempt.

Dosage

12 years and over: use whenever the urge to smoke or vape is felt or to prevent cravings. Maximum dose: 6 cartridges per day. Smoking and vaping cessation: replace all cigarettes and e-cigarettes with the inhalator, then reduce the number of inhalators used until stopped completely. Cutting down prior to quitting: use the inhalator as needed between smoking and vaping episodes to prolong smoke/vape-free intervals as much as possible before stopping smoking or vaping completely. Those who have quit smoking but are having difficulty discontinuing the inhalator should speak to a pharmacist or doctor for advice.
