

## Nicorette Inhalator

### Uses

Relieves and/or prevents cravings and nicotine withdrawal symptoms. Helps smokers ready to stop smoking immediately and those cutting down their cigarette usage before stopping. Suitable for used during pregnancy and breastfeeding.

### Dosage

12 years and over: use whenever the urge to smoke is felt or to prevent cravings. Maximum dose: 6 cartridges per day. Smoking cessation: replace all cigarettes with the inhalator, then reduce the number of inhalators used until stopped completely. Cutting down prior to quitting: use the inhalator as needed between smoking episodes to prolong smoke-free intervals as much as possible before stopping smoking completely. Those who have quit smoking but are having difficulty discontinuing the inhalator should speak to a pharmacist or doctor for advice.
